LOGIC AND ACCURACY TESTING

Voter Registration & Elections
DeKalb County, Georgia

Logic and accuracy testing (L&A) is the process we use before each election to verify that the equipment can create correct ballots and tabulate the votes marked on them. There are three types of equipment being tested.

Poll pads are used to create voter cards.

Touchscreens display your ballot and then print a paper copy.

Tabulators scan your ballot and record the votes you marked on it.

Each tabulator scans a **test deck**—a series of test ballots marked with a known pattern. The tabulated votes are compared to the votes known to be marked on the test deck.
